

# QIAM™

## Quake's Intelligent Asset Management

RFID data analytics system

### Advantages

- › HL7 compliant
- › Customizable
- › Standard UHF Radio Frequency (RFID)
- › Windows AD authentication
- › Easy-to-use web-based interface
- › Seamless integration with any third-party software including ERP, LIS, EMR, security systems, databases and other systems
- › Enhance the audit accuracy of your business
- › Industrialize control of business security items
- › Automate regulatory compliance practices
- › Synchronize management of your valuable assets
- › On-Demand printing and association of assets and people

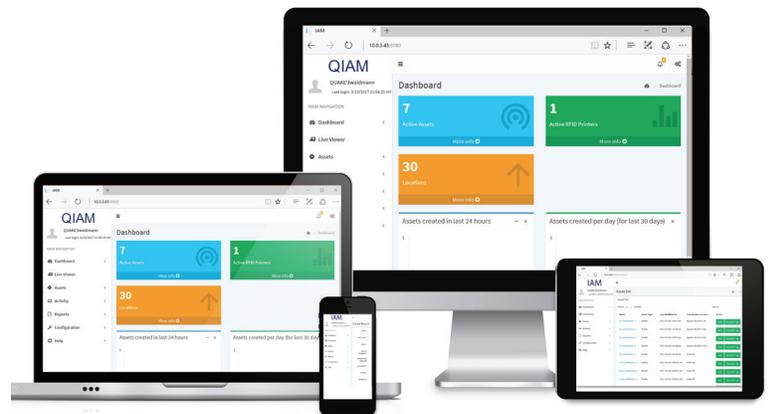

### Automate Physical Asset Management with RFID

Quake's Intelligent Asset Management solution, QIAM™, provides complete visibility and control of your assets throughout their life-cycle, from receiving through decommissioning.

QIAM delivers ROI with a 10x decrease in inventory, audit, receiving and asset find time according to our benchmark studies. Asset theft, loss, and misplacement can be automatically detected. Asset locations are updated and alerted in real time. Regulatory compliance is enhanced while associated labor costs are reduced.

QIAM uses industry standard passive UHF Radio Frequency (RFID) to monitor and control physical asset movement. While each customer decides the number of read points required throughout a facility, building or data center, a single inexpensive hand-held reader combined with IAM delivers significantly enhanced audit accuracy, asset security and labor time savings.

Additional read points can provide even greater tracking resolutions, security and process automation.

### Extend Your Existing Asset Management Software

While QIAM can operate standalone as a powerful but easy to use asset management solution, QIAM also seamlessly integrates and extends most ERP based solutions. QIAM enables you to monitor and control physical asset identification and movement in real time with passive UHF RFID - generate more value from your existing investment.

### High Accuracy and Easy Integration are the Cornerstones of a Successful RFID System

QIAM is the first passive RFID system used by world leading banks, high security government agencies, hospitals, and hosting companies that is based first and foremost on the physics of RFID. What that means to you is that the system automatically provides extremely high accuracy every time an asset moves or needs to be counted.

By using passive UHF RFID tags, the cost is also significantly less that of an active system.

# QIAM™ – Quake's Intelligent Asset Management

## Frustrated with time consuming audits?

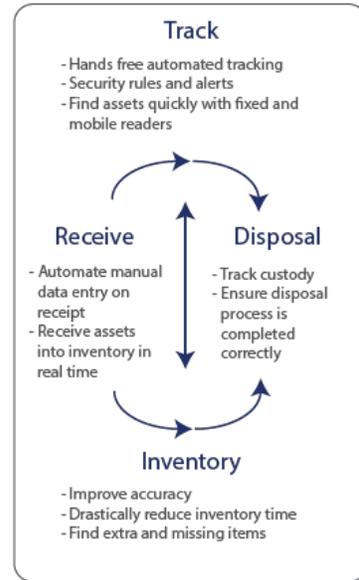

QIAM works for you year round so that when an audit comes, it is fast, automated, accurate and painless. Users can inventory racks in seconds and facilities or warehouses in minutes.

## What does it cost if you lose a critical asset?

Your assets are valuable, and it is costly when they are lost or worse, stolen. QIAM automatically tracks items as they move through or around your facility, and ensures assets of value do not exit without security alerts including pager messages, email and SNMP traps.

## How accurate is your inventory?

QIAM knows what is in your inventory, in each location. You will know where your assets are, where they have been, and how long they have been there. Your inventory will not only be accurate, but informative.

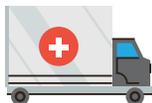

## Manage assets, activity, reports and configurations

- › Multiple User types with different viewing and editing rights
- › Configuration of Rules
- › Configuration of Alerts
- › Configuration of Asset Types
- › Standard and Custom Reports
- › Clean Dashboard view for quick views
- › Real time data related to the asset
- › On-Demand printing and association of assets and people
